The United Nations (UN) Sustainable Development Goals (SDGs) of the 2030 Agenda for Sustainable Development is a set of global objectives aimed at achieving tenable and poverty-free world by 2030. The SDGs is a successor of the Millennium Development Goals (MDGs), an international agenda aimed at halving world poverty, stopping the spread of communicable diseases and providing universal primary education until 2015, adopted in 2000. The MDGs is comprised of the following goals: 1) eradicate extreme poverty and hunger; 2) achieve universal primary education; 3) promote gender equality and empower women; 4) reduce child mortality; 5) improve maternal health; 6) combat HIV/AIDS, malaria and other diseases; 7) ensure environmental sustainability; and 8) global partnership for development. Significant progress was reached in the framework of the MDGs, especially in terms of the fight against poverty and access to primary education. Nevertheless, according to the 2015 UN assessment of the MDGs, the program did not contribute to the lives of the poorest and the most disadvantaged communities due to their age, gender, ethnicity or disability. As the MDGs term came to an end in 2015, the process to establish the Post-2015 Development Agenda led to the creation of the SDGs. The SDGs was developed taking into account all of the shortcomings of the MDGs. To create an all-encompassing set of objectives, a high-level UN Open Working Group including 70 of the UN member states sharing 30 seats on the committee worked on preparing the SDGs. One to four countries from the same UN regional group shared each seat. The MDGs was described as “an internal UN bureaucratic creation.” The final draft of the agenda was approved on July 19, 2014. Finally, a set of 17 goals in the framework of the SDGs aimed at ending poverty and protecting the Earth, known as “Transforming Our World: The 2030 Agenda for Sustainable Development,” was adopted on September 25, 2015. The plan came into force in January 2016. The SDGs was prepared on the basis of the principles of the document named “The Future We Want” adopted as a result of the UN Conference on Sustainable Development, also known as Rio+20, which took place in Rio de Janeiro, Brazil on June 20-22, 2012. The SDGs are not legally binding but the countries are expected to take action on a national level. Implementation of the goals is to be based on each country’s policies on sustainable development. The SDGs is set to be achieved via a range of tools such as financial support for developing nations, technology transfer, and development of an open trading system to increase export opportunities for the developing nations. In this light, the Sustainable Development Goal Fund (SDG Fund) was created in 2014 to implement the agenda by attracting international donors and agencies by joining the efforts of governments, academia, civil society and the private sector. The SDG Fund has joint programs with an approximate budget of $70 million in 21 countries across four regions: Africa, Latin America, Asia and the Arab States. The programs are mostly focused on three sectoral areas: the issues of economic growth for poverty eradication, food security and nutrition, water and sanitation. Partnership in the implementation of the programs is reached via matching funds, meaning that a financial contribution from outside must match the monetary support made by the Fund. As for the criticism of the failure of the MDGs to assist certain groups who are most in need, the SDGs has a universal nature covering even the poorest and farthest communities. The largest difference between the agendas is the target countries: while MDGs worked in the format of helping poor nations, i.e. developing countries only, the SDGs aims to work across the world, paying special attention to the poorest people in both developing and developed countries, in order to close the gap between the poor and rich. The SDGs is a call for action to the governments, large corporations, the private sector and civil society of low-, middle- and high-income countries.

Two agendas have had similar goals; however, due to the criticism regarding the narrowness of the MDGs, the SDGs was expanded from eight to 17 goals consisting of 169 targets. Adding a new range of issues absent from the MDGs, the SDGs created the following set of goals: 1) No poverty; 2) Zero hunger; 3) Good health and well-being; 4) Quality education; 5) Gender equality; 6) Clean water and sanitation; 7) Affordable and clean energy; 8) Decent work and economic growth; 9) Industry, innovation and infrastructure; 10) Reduced inequalities; 11) Sustainable cities and communities; 12) Responsible consumption and production; 13) Climate action; 14) Life below water; 15) Life on land; 16) Peace, justice and strong institutions; and 17) Partnerships for the goals. Each of these goals has an agenda that is expected to be achieved over the course of 15 years. It can be seen that all 17 goals are interconnected, and progress cannot be achieved separately. Without the even advancement across all agendas, the most important objective of eradicating poverty, including extreme poverty, and hunger is not possible as negative aspects of life such as climate change, water scarcity, illnesses, inequality, etc. hit the poorest communities first. Economic, social and environmental development go hand in hand, and it is essential to achieve improvement in all aspects to end poverty and hunger. If the goals set by the agenda are met, the issues of poverty, climate change, and inequality are to be overcome by 2030.
Politics, Foreign Affairs and Security

- During his official visit to Yerevan, the President of Tajikistan, Emomali Rahmon, and his Armenian counterpart, Serzh Sargsyan, discussed bilateral relations on trade, political, industrial, agrarian, healthcare, scientific, educational and environmental issues.
