THE CENTRAL ASIAN POLICY OF JAPAN

Due to the geopolitical location and the natural resources of Central Asia, a wide range of nations has focused its attention on the region, developing various strategies towards the regional states. Japan is one of those nations. In the early years of independence of the Central Asian countries, Japan did not pursue an active policy towards the region, however, in the recent years, due to the growing geopolitical importance of the region, receiving more international attention, Japan’s interest in the region has also increased. In general, Japan has intensified its Central Asian policy on the account of developments in the energy sector of the regional countries, allowing them to increase production of the energy resources, which could become an alternative to the energy resources imported to Japan from the Middle East. Therefore, Japan initiated its own projects towards the region in the fields of economy, politics and security.

Currently, Japan provides economic and technical aids and outrights to the Central Asian countries in the framework of the program of the Japanese government on the Official Development Assistance (ODA) towards the developing countries. As the ODA is one of the most effective instruments of the Japanese foreign policy and international relations, the program plays a significant role for Tokyo. The ODA program has been developed in order to provide economic aid and quotas to the developing countries and the development needs of these countries. After being included in the list of developing countries on January 1, 1993 by the Development Assistance Committee of the Organisation for Economic Cooperation and Development (OECD) in Japan, the Central Asian countries could have access to these aids. Since then, Japan has revised its foreign policy interests towards Central Asia and has implemented various programs and initiatives, particularly, the ODA program. In this context, in 1997 the former Prime Minister of Japan, Ryutaro Hashimoto, introduced a diplomatic concept called the “Eurasian Diplomacy”. The main aim of this concept was to develop political and economic cooperation between Japan, Russia and the Central Asian countries. According to this concept, Japan’s Central Asian policy was based on three key principles: (i) to create a political dialogue aiming to enhance trust and mutual understanding; (ii) to establish close partnership and economic cooperation in the exploration of natural resources aiming to foster development of the region; (iii) to build peace through nuclear non-proliferation, fostering of stability and democratization in the region.

In his speech presented in 1997, Ryutaro Hashimoto emphasized the geo-strategic importance of Eurasia and highlighted the importance of the Caspian region due to its high oil and natural gas reserves. Besides, the “Diplomatic Bluebook 1998” published annually by the Japanese Foreign Ministry emphasized that Japan should continue its relations with China and Russia in the framework of the “Eurasian Diplomacy”.

In 1998, in order to enhance the exploration of natural resources and the transportation infrastructure, Japan developed the “Silk Road Diplomacy” and started using the term “Silk Road countries” in relation to the Central Asian countries. In this sense, Japan has taken part in the process of restoration of democracy in these countries by supporting economic reforms. Within the framework of this program, for the first time Japan integrated the Central Asian region as part of its foreign policy priorities. In 2004, the Japanese government launched the “Central Asia plus Japan” (CAJ) dialogue, which was built based on the “Silk Road Diplomacy” program. In order to enhance regional cooperation in the framework of the “Central Asia plus Japan” dialogue, Japan launched regular meetings with the Central Asian countries. In the context of the dialogue, five main cooperation fields were determined: (i) political dialogue; (ii) intra-regional cooperation; (iii) business promotion in the region; (iv) intellectual dialogue; and (v) cultural and people-to-people exchange.

In light, the current the Foreign Minister of Japan, Aso Taro, in his policy speech entitled “Central Asia as a Corridor of Peace and Stability” on June 1, 2006, stressed that Central Asia should be defined as a new direction in the foreign policy of Japan and emphasized the importance of providing security in the region in order to produce and transport the regional natural resources to Japan. This initiative clearly showed that Japan would implement long-term policies towards Central Asia. The aforementioned Japanese initiatives towards Central Asia have been gaining importance, especially in terms of energy resources in the region. Even though Japan has been meeting most of its energy needs from the Middle Eastern resources, it has been in search of new opportunities to gain access to the Central Asian energy resources. Recent developments in the Middle East and the weakening of atomic energy sector in Japan has sparked the country’s interest in the energy resources of Central Asia. For instance, in 2014 Japan’s oil imports from the Middle East were over 80%, only 34% of which belonged to Saudi Arabia. Conversely, Japan’s oil imports from Russia constituted only 8%.

In 2005, one year after the acceptance of the CAJ dialogue, with an assistance of Japan, Afghanistan was included in the Central Asia Regional Economic Cooperation (CAREC) program established by the Asian Development Bank. This event was interpreted as the display of the Japanese support of the idea of transferring the Central Asian energy resources through the natural gas via pipelines to South-East Asia. Japan’s economic interest in the Central Asian countries became even more visible after the official visit of the Japanese Prime Minister, Shinzo Abe, to these countries in 2015, which resulted into signing of several agreements, totaled approximately more than 45 billion dollars most of which were signed with Turkmenistan and Uzbekistan. In this sense, Japan and Turkmenistan signed agreements worth a total of $18 billion. The most important agreements being on the Japan’s investment into the Galkynysh natural gas field, which is the largest natural gas field in Turkmenistan and the 4th largest one in the world. According to the agreement, five Japanese firms will take part in the construction of onfield facilities of the Galkynysh natural gas field. For instance, Japan announce its intention to investment $10 billion in this project. Besides, Japan and Uzbekistan signed various agreements worth a total of $8.5 billion, most of which are in the field of energy. Uzbekistan’s plans to increase natural gas production has given a great opportunity to Japan to invest in new natural gas exploration projects in this country. Also, reconstruction of the Turkmenistan Thermal Power Plant and investments aimed to establish an ammonia and urea plant by Mitsubishi are worth mentioning. Moreover, Japan signed investment agreements with Kazakhstan worth $1.5 billion, with Kyrgyzstam worth $120 million and with Tajikistan worth $7.5 million. While the agreements with Kazakhstan include the construction of the Atomic Energy Plant in the Arslanbob region and the $14.5 billion, most of which are in the field of energy. In conclusion, although Japan is geographically remote from the Central Asian region, the Central Asian policy of the country seems to be in a steadily developing process. After careful examination of the Japanese investments into the countries in the region, it can be concluded that energy investments are prioritized and as a result, the amount of investments towards Turkmenistan, Uzbekistan and Kazakhstan rich in natural resources is high. As Kyrgyzstam and Tajikistan have only water energy resources, Japanese investments towards these countries are mostly made in the form of humanitarian aid. Besides, active operations of Japanese centers in the region, such as the establishment of the Japan Technical University in Turkmenistan and the construction of the Innovator Center for the Youth in Uzbekistan, shows that Japan recognizes the importance not of economic investments alone but also of cultural investments. On the one hand, these developments can be regarded as a deliberate policy, which is implemented by Japan in order to have an active and positive image in the region. On the other hand, these developments can be regarded as Japan’s entrance to the competition process with Russia and China in economic, political and ideological perspectives of the region.
