CULTURAL DIMENSION OF CHINA’S NEW SILK ROAD INITIATIVE

The most obvious incarnation of revitalization of China’s efforts to strengthen its presence in Eurasia became the Chinese New Silk Road Economic Belt (SREB) and the 21st century Maritime Silk Road united into the so called One Belt, One Road Initiative, which has become one of the most iconic and innovative manifestations of modern trends of economic globalization and regionalization. The Silk Road Initiative aims to build a network of countries along the SREB and also representatives of the Shanghai Cooperation Organization (SCO) and UNESCO attended the meeting. It also should be mentioned that according to the Vision and Actions on Jointly Building Silk Road Economic Belt and 21st-Century Maritime Silk Road, China will focus on both holding years of culture, arts and film festivals, TV weeks and book fairs in each other’s countries and cooperating on production and translation of high-quality films, radio and TV programs. It is obvious that tourism relations between countries along the SREB should also be enhanced.

Speaking of the cultural dimension of China’s New Silk Road Initiative it should be mentioned that it is based on the principle of interaction between the nations. According to the Fifth cooperation priority of the Vision and Actions on Jointly Building Silk Road Economic Belt and 21st-Century Maritime Silk Road, strengthening the public diplomacy or people-to-people bond includes the following areas: education (10,000 scholarships per year); culture and art; tourism; health care; youth policy; science and technology; political parties and parliaments cooperation. Thus, China has proposed a geo-cultural strategy for Eurasia, which should provide realization of its economic goals and priorities. Actually, the formulation of the geo-cultural framework of the New Silk Road Initiative (NSRI) is just as important for China as the implementation of its economic strategy. China’s cultural vision of the NSRI is based on the assumption that mutual trust and mutual understanding of each other’s art and culture will definitely enhance international cooperation and make it possible to overcome any deeply entrenched prejudices and suspicions raised from cultural differences. The Chinese experts stated that further efforts to build mutual trust and to make clear the difference between China’s vision and those of Russia and the U.S., stressing development and cooperation without deep economic integration are among the main goals of establishment of the Silk Road Economic Belt initiated by Beijing. It is quite understandable that the need to overcome the long embedded divisions and prejudices regarding Chinese growing economic domination over the region, China’s population growth rate and Beijing’s geopolitical ambitions, some of which are justified while others are not, will be one of the main obstacles for the Silk Road Economic Belt implementation. Nowadays, the ancient Silk Road is being rebuilt in the form of a transcontinental network of bullet trains, oil and gas pipelines, highways, telecommunication lines and satellites, trade agreements and scientific cooperation. However, the SREB also needs a cultural dimension. The aforementioned barriers are mostly based on the sinophobic formed in many countries over the world, especially neighboring China, centuries ago. Therefore, Beijing’s choice to use the concept of the revival of the Silk Road to destroy these alliances, newly formed phobias and stereotypes towards China and people of the Chinese origin was not accidental. The Chinese authorities believe that the New Silk Road Initiative will be successfully implemented in the region due to historical analogies of mutual enrichment of cultures. The cultural dimension of the NSRI played an important role in the creation of the positive perception of the Chinese project. One of the major outcomes of the Chinese strategy aimed at boosting cultural interaction within the framework of the SREB is the creation of a non-governmental Organization for Cultural Cooperation, “Eurasia – Silk Road”. The agreement on launching of the Organization was reached during the Second Great Silk Road International Cultural Forum, which was held in Moscow on September 14-15, 2015 and organized by the Chinese Foundation of Culture and Arts of Nations, the China’s Silk Road Fund, the Fund of Spiritual Development of people of Kazakhstan and the Intergovernmental Foundation for Humanitarian Cooperation for Commonwealth of Independent States. The main theme of the Forum was “Developing Partnership: Planning of Joint Projects for Cultural Cooperation”. More than 300 eminent scientists, artists, politicians, businessmen and media representatives from countries along the SREB and also representatives of the Shanghai Cooperation Organization (SCO) and UNESCO attended the meeting. It is obvious that tourism relations between countries along the SREB should also be enhanced.

Therefore, the Chinese large-scale New Silk Road Initiative is one of the most ambitious projects in the world. At the time when the initiative was firstly launched, it caused a great deal of concern and even mistrust in Eurasia. However, it took only two and a half years to develop rather strong support of the SREB initiative along the countries of the route. By implementing the NSRI China hopes to spread its cultural values, which could become a “modern fashion throughout the main countries along the road and in long-term perspective could even lead to the formation of the “Chinese Eurasia” or the “sinocentrical world”.
