ECONOMIC DEVELOPMENT IN UZBEKISTAN: RESULTS OF 2015 AND FUTURE PRIORITIES

Despite the negative effects of the global financial crisis on the economy of Uzbekistan, the developments in 2015 demonstrated that Uzbekistan achieved a considerably high economic growth rate and macro economic stability due to the consistent implementation of the economic program, the priorities of which include the provision of fundamental structural reforms, protection of private property and small business interests, etc.

According to the ranking of the World Economic Forum, Uzbekistan managed to enter the list of the top five countries with the fastest growing economies in the world based on the development outcomes for 2014-2015 and forecasts for 2016-2017. For instance, at the end of 2015, the country’s gross domestic product (GDP) grew by 8% and the industrial output increased by 8%, while agricultural production and construction works increased by almost 7% and 18% respectively. The annual state budget was executed with a surplus of 0.1% of GDP. The inflation rate stood at 5.6%, which is within the forecasted parameters. Uzbekistan managed to achieve a surplus in foreign trade balance. The public debt level did not exceed 18.5% of GDP in 2015.

According to the World Bank’s (WB) report, Uzbekistan is currently among the top ten countries in the world, which achieved the best results in improving the business environment in 2015. Actually, according to the rating of «Doing Business» prepared by the WB, Uzbekistan managed to improve its ranking from 103rd to 87th position. Moreover, according to the indicator, namely, «Getting Credit», in the last three years, Uzbekistan’s ranking rose from 154th to 42nd position improving its ranking by 63 positions last year.

Due to the measures which were undertaken to lessen the role of government in economy, the share of small businesses in GDP rose from 31% in 2000 to 56.7% in 2015. In 2015, over 33% of industrial and 98% of agricultural products were produced by the small and medium-sized enterprises. 77% of the total employment account for small and medium-sized enterprises.

There is also a dynamic development in the service sector. In 2015 the volume of paid services and retail trade turnover increased by 10.8% and 15% respectively. The share of service sector in GDP reached 54.5% in 2015 compared to 49% in 2010. The banking system has also been further strengthened. In 2015, total assets of the banking system increased by 23.3% compared to 2014 and reached 7.8 trillion soums.

In 2015, implementation of measures and investment projects on structural transformations, modernization as well as formation of modern infrastructure ensured the investments to increase with an amount of $15.8 billion, which is 9.5% more than in 2014. Over $3.3 billion or 21% of the total investments were foreign investments, 73% of which were foreign direct investments. Over 67.1% of investments were made in the fields that are necessary for the development of the industrial sector. As a result, 158 large production facilities, which were worth $7.4 billion, have been commissioned. Besides, in 2015, fundamental structural changes took place in the agricultural sector. More than 7.5 million tons of grain and more than 3.35 million tons of cotton were harvested.

According to the statistical data, the real per capita income increased by 9.6% and increased from $5,536 in 2014 to $6,068 in 2015. It should be noted that the share of revenues from business activities increased to 52% in 2015 compared to 47.1% in 2010.

Uzbekistan is planning to boost the real GDP of the country by at least twofold by 2030. In order to achieve this goal, the average annual growth rate should not be less than 4.8%. Moreover, the country intends to increase the share of industry in GDP to 40% by 2030, which was 33.5% in 2015, and decrease the share of agriculture from 16.6% in 2015 to 10.8% by 2030. It should be noted that Uzbekistan is going to focus on reducing the production of cotton from 3.35 million tons to 3 million tons by 2020, which will help to optimize the irrigation strategy of the country. Furthermore, Uzbek officials announced that by 2030 they are planning to reduce the energy intensity of GDP by 2 times by introducing energy saving technologies nationwide, as well as to increase the production of textile and light industry products, fruits and vegetables by 5.6 and 5.7 times respectively.

Uzbekistan also scheduled that by 2020 the country would widely introduce the information and communication technologies (ICT) to the economic sector. It must be mentioned that in 2015 the ICT share accounted for only about 2% of Uzbekistan’s GDP. Therefore, the Uzbek Government pays particular attention to the acceleration of the creation of the «Electronic Government» system.

Therefore, the most important tasks for Uzbekistan in the near future perspective are to increase the competitiveness of the economy and to strengthen the support for the export enterprises. It is obvious that Uzbekistan will use all its available reserves in order to reach the forecasted economic indicators to provide deep structural transformations and modernization of the country.
