THE IMPLEMENTATION OF FISCAL POLICIES IN THE ECONOMY OF KYRGYZSTAN

As Kyrgyzstan is an oil importer country, low oil prices in the world market have contributed to high consumption and growth in the country. As a result of a significant increase in gold exports, economic growth was also driven by net trade. While the foreign debt recession in Russian economy, which caused a decline in the demand for Kyrgyz goods resulting a reduction in non-gold exports of the country in 2015, economic growth rate increased from 3.6% in 2014 to 3.6% in 2014, mainly due to the high performance in gold production.

Recently, Kyrgyzstan has started to implement an enormous public investment program (heavily on infrastructure and energy sector), most of which was financed by external debt, mainly from China, Russia and the International Monetary Fund. While net external debt to GDP ratio was 76.3% in 2014, it increased to 81.2% in 2015. It should be emphasized that Kyrgyzstan will face a high net external debt which constitutes approximately 80% of current account receipts (CARs) between 2016-2018 while this ratio was 30% between 2012-2015. Due to high external debt together with depreciation of Kyrgyz som, gross government debt to GDP ratio is expected to reach 70% of GDP between 2016-2019 compared to 55% between 2012-2015.

Besides, net foreign direct investments (FDI) increased from $292.6 million in 2013 to $757.6 million in 2014 and to $818 million in 2015. As a result of a number of confirmed foreign projects and Russia’s commitment to support Kyrgyzstan’s accession to the Eurasian Economic Union (EEU) by establishing $1 billion Russian-Kyrgyz Fund, net FDI are expected to reach 5% of GDP between 2016-2019.

On the other hand, the fiscal deficit to GDP ratio reached 5.8% in 2015, compared to 4.1% in 2014 due to increases in capital expenditures and recurrent expenditures (such as wage increases for some civil services ahead of parliamentary elections and an important increase in purchases of goods and services). The fiscal deficit is expected to increase to 6% between 2016-2017 due to high infrastructure spending plans. In order to reduce the government debt to sustainable levels, the government is working on a medium-term debt management strategy, which would restrict borrowing projects that will help to enhance economic growth and promote social development. That’s why, for 2018-2019 period, the fiscal deficit to GDP ratio is expected to reduce to the average of 3.5% with the recovery in public revenues triggered by economic growth and higher customs receipts.

The public expenditures to GDP ratio increased from 38.8% in 2014 to 39.1% in 2015. The factors that cause total expenditures to increase are as follows: (i) the pressure on the public budget in connection with the parliamentary elections, (ii) the uncertainty over the share of pooled EEU customs revenues which Kyrgyzstan accepted according to the new arrangement, (iii) the increases in wages without increasing productivity and goods and services, (iv) the wage bill without increasing productivity also contributes to this increase. For example, the wage bill in Kyrgyzstan amounts over 9% of GDP in 2015 compared to the other regional countries where the wage bill is about 6%. In order to reduce the wage bill, the government has been implementing the Program for Enhancing Civil Service Pay for 2013-2020 aimed at improving fairness, transparency and predictability of civil service salaries and the wage bill.

On the public revenues side, the public revenues to GDP ratio increased slightly from 33% in 2014 to 34% in 2015. Over the past 10 years, tax revenues to GDP ratio increased from 12% to 21% in 2015. The factors that affect the performance of the public revenues are as follows: (i) the tax collection on goods and services has a good performance. For instance, value-added tax (VAT) collection has performed about 1% of GDP, the VAT tax rate in Kyrgyzstan is 12%, which is low compared to the average rate (18%) in the region countries, (ii) there is an increase in excise tax rates for tobacco and alcohol, (iii) the tax revenues increased from 31% in 2014 to 32% in 2015 and (iv) due to the grant support, the share of grants in public budget increased from 2.4% in 2014 to 2.5% in 2015, (v) the accession to the EEU is expected to increase the customs revenues by about 1.5% of GDP. But VAT collection can decline due to the shift in VAT collection from the customs service where the VAT was paid at the border, to the state tax services where VAT is now paid based on the declaration after the good enters the territory, (vi) the performance of personal and corporate income tax is poor due to the narrow tax base which causes a high unfairness in the tax system, especially the tax exemptions which are applied mostly in agriculture and processing sectors and which represent about 3.5% of GDP have been destabilizing the tax system rather than improving the revenue performance.

In conclusion, due to the robust measures that should be taken to reduce public expenditures and increase public revenues, the fiscal balance in the economy can recover slightly in the medium-term in Kyrgyzstan. Although the slow growth in the domestic economy and in regional economies can hinder this process, implementing robust fiscal policies can help to stabilize the fiscal balance and the real economy. In this respect, fiscal policies need to be carefully redesigned. On the public expenditures side, the government should streamline the public expenditures by rationalizing the expenditures on goods and services and keeping an eye on the country’s share in the EEU customs revenues. On the public revenues side, the government should strengthen the public revenues by expanding its tax base and improving the performance of corporate and personal income taxes. The government also should stabilize the public debt policy. Regarding the process of establishing a medium-term debt management strategy, firstly, the government should evaluate the importance of an infrastructure project, secondly, decide to borrow from external or domestic markets and thirdly, decide on an affordable interest rate. Besides, while deciding on public investment projects, the government should establish priorities and growth-enhancing projects should be given priority.
